

RIPPLESTONE 3.8 – RELEASE NOTES

CONTENTS

| | |
|---|----|
| System Wide | 3 |
| New Themes (3.8.1.0) | 3 |
| Wider Default Skin (3.8.1.1) | 3 |
| Home Page | 5 |
| New Menu Ribbon (3.8.1.0) | 5 |
| Added new Collapsible panels (3.8.1.0) | 6 |
| Fixed Bug with Row Level Security (3.8.1.0) | 6 |
| Fixed Some Problem With the Minimal Home Page Feature (3.8.2.2) | 7 |
| Added a New System Folder (3.8.7.0) | 7 |
| Reports | 8 |
| Allow the Send To feature with the pdf viewer (3.8.2.0) | 8 |
| Added Custom Export Options (3.8.2.5) | 8 |
| Added New Export Options to the List (3.8.2.5) | 8 |
| RS Express | 8 |
| Fixed a Problem with the Error Page (3.8.2.5) | 8 |
| Added Viewer Option (3.8.2.5) | 8 |
| Users | 9 |
| Removed the UserID from the Query String (3.8.5.1) | 9 |
| Removed UserID from the Query String (3.8.7.1) | 9 |
| Added A Copy User Function (3.8.8.1) | 9 |
| Roles | 9 |
| Updated the Roles Page To Use New Grid (3.8.2.5) | 9 |
| Changed the Selection for Roles (3.8.2.5) | 10 |
| Changed the Save Roles Function (3.8.3.0) | 10 |

Scheduler Changes..... 10

- Added Save and Send only when there is no data (3.8.1.0) 10
- Added Custom Output File Name (3.8.1.0)..... 12
- Added a New Output Type (3.8.1.0) 13
- Fixed Bug with Boolean Parameters (3.8.1.0)..... 13
- Changed the code to Check for Missed Queued Jobs (3.8.1.0) 13
- Added Column Chooser to the Grid (3.8.2.0) 14
- Added Drill Down to the Schedule Jobs List (3.8.2.0) 15
- Added Date Offset to the Output File Name (3.8.2.0)..... 15
- New Checkbox for the Unmanaged Output File Name (3.8.2.0) 15
- Added colored groups on the Unmanaged Output Tab (3.8.2.0) 16
- Added Code to the Scheduler to Check for Duplicate jobs (3.8.2.0) 16
- Changed the Code to allow more than one Parameter Token (3.8.2.0)..... 17
- Fixed a Problem With Boolean Parameters (3.8.2.2)..... 17
- Changed the Calculation for Quarterly Jobs (3.8.2.4) 17
- Changed the Sort Order for the Schedule Log Grid (3.8.2.5)..... 17
- Added new Option to Turn Off the Cleanup Utility (3.8.2.6)..... 18
- Fixed Problem Where Admins and Schedulers Would See Duplicate Jobs (3.8.2.6) 18
- Removed the Keyword Distinct From the SQL Statement (3.8.3.0)..... 18
- Added FTP Support for Active and Passive Connections (3.8.5.0) 18

Schedule Groups 19

- Changed the Monthly and Quarterly Groups (3.8.1.0) 19
- Changed the report selection (3.8.1.0) 19
- Updated to Allow Jobs using External Parameters (3.8.2.3)..... 19
- Changed the SQL Select for Scheduled Jobs (3.8.2.4) 19
- Fixed Problem Where Emails were not Sending Correctly (3.8.2.6) 20

Trusted System 20

- Updated Code to user New Code (3.8.3.2) 20

The RSBlueBlocks_Wide has also changed to center the site; this was left justified. This wide skin is 1200px wide and displays report that are landscape better.

You can change skins on the System Setup and Configuration page under the Appearance tab.

|  Theme | <input type="text" value="Office2010Blue"/> |
|  Home Page Message | <input type="text"/> |

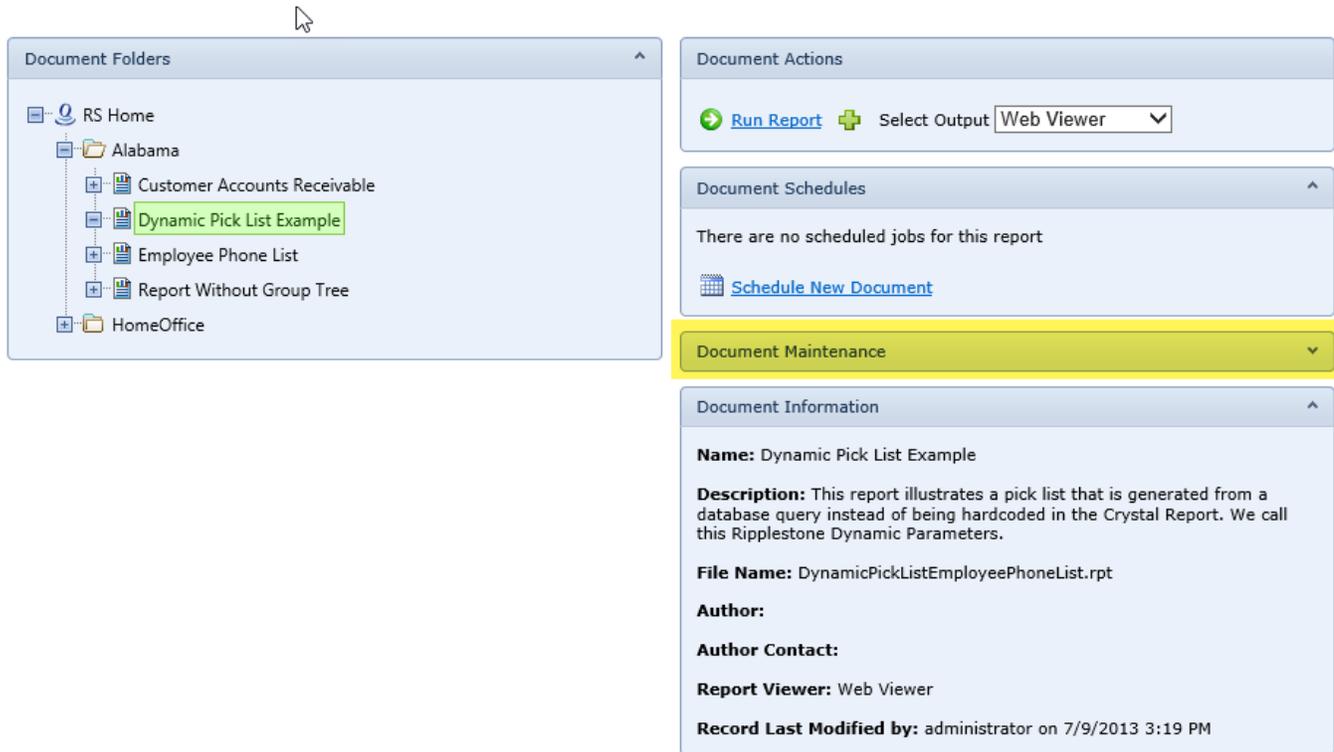

NEW MENU RIBBON (3.8.1.0)

The old navigation links and Administration page has been replaced by an easier to use ribbon menu. The new menu allows you to find the pages quicker and with less clicks. The items displayed will change depending on who is currently logged in and the menu can also be collapsed to save space.

The screenshot displays the Ripplestone Home Page interface. At the top left is the Ripplestone logo. A navigation bar contains links for 'Ripplestone', 'TechSol Consulting', and 'All About Reports Blog'. Below this is the 'Ripplestone Menu' ribbon, which is organized into sections: 'Home' (Home, Favorites), 'Quick Actions' (Admin Dashboard, Scheduled Documents, Users, Roles, Database Connections), 'System' (System Setup & Configuration, Active Users, Logs Files, About), and 'Administration' (Row Level Security, Trusted Systems, Saved File Locations). The user 'Jeffrey' is logged in, and the current user is identified as 'Jeffrey'. A search bar is located below the ribbon. The main content area shows a 'Home' tab with a 'Document Folders' pane on the left containing 'RS Home', 'Alabama', 'Clients', 'HomeOffice', and 'Ripplestone Reports'. The 'Ripplestone Home' pane on the right provides an overview and links to 'Edit Folder', 'Create New Folder', 'Publish New Document', and 'Schedule New Document'. A 'My Documents' pane at the bottom right explains its purpose. The footer includes the version '3.8.1.0', copyright '© 2017 Ripplestone', and a small logo.

ADDED NEW COLLAPSIBLE PANELS (3.8.1.0)

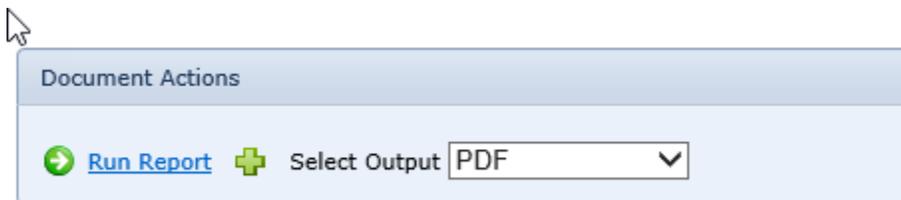

The home page uses new collapsible panels. This allows the user to hide information that they don't need to see. The panels also can use the new Themes where the older panels had a set color.

The screenshot displays a user interface with several collapsible panels. On the left, the 'Document Folders' panel is expanded, showing a tree view with folders like 'Alabama' and 'HomeOffice', and reports such as 'Dynamic Pick List Example' (highlighted in green). To the right, the 'Document Actions' panel shows a 'Run Report' button and a 'Select Output' dropdown menu set to 'Web Viewer'. Below it, the 'Document Schedules' panel indicates no scheduled jobs and provides a 'Schedule New Document' link. A yellow highlight is placed on the 'Document Maintenance' panel. At the bottom, the 'Document Information' panel is expanded, displaying details for the 'Dynamic Pick List Example' report, including its description, file name, author, and last modified date.

FIXED BUG WITH ROW LEVEL SECURITY (3.8.1.0)

There was a bug when a user selected the PDF option for the report output and the report was using Row Level Security. This has been fixed and the output will be the same as with the web viewer.

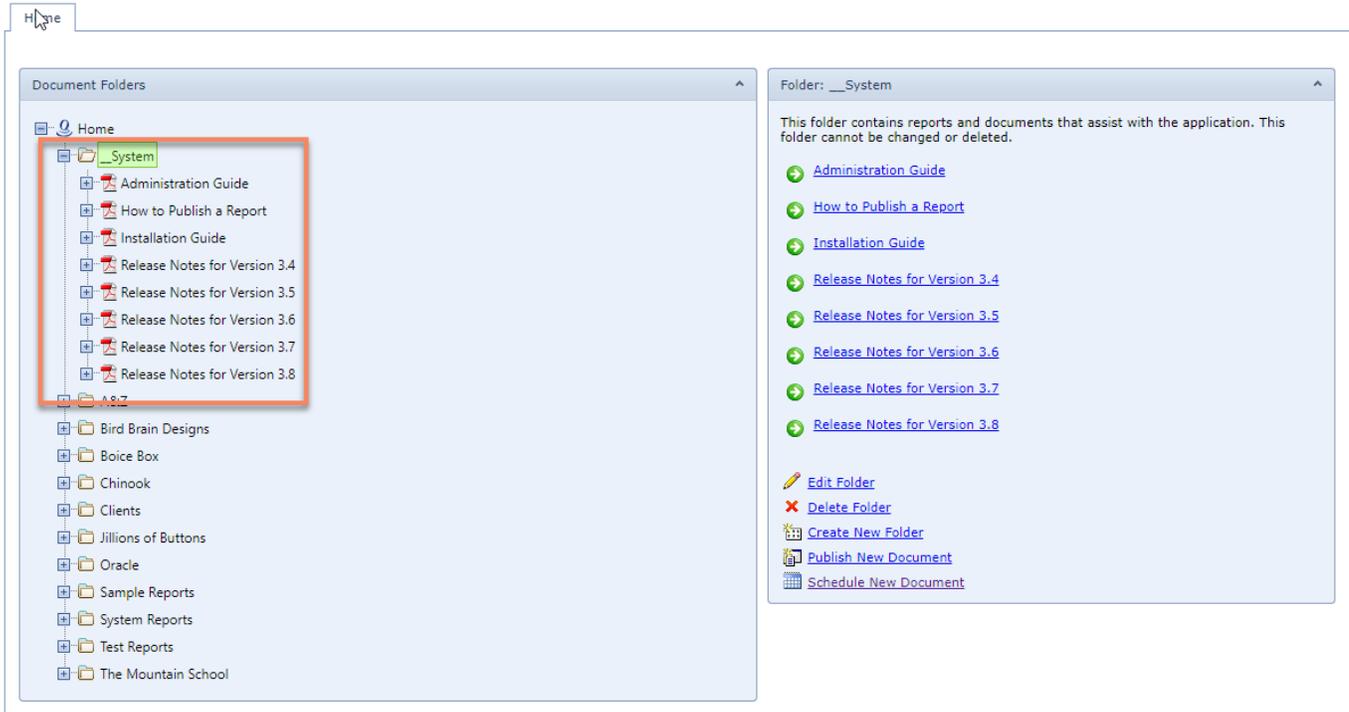

This screenshot shows a close-up of the 'Document Actions' panel. It features a 'Run Report' button with a green arrow icon and a 'Select Output' dropdown menu. The dropdown menu is currently set to 'PDF', demonstrating the fix for the bug mentioned in the text.

FIXED SOME PROBLEM WITH THE MINIMAL HOME PAGE FEATURE (3.8.2.2)

Some of the sections on the home page were not getting hidden when the minimal home page feature was selected.

ADDED A NEW SYSTEM FOLDER (3.8.7.0)

Added a new system folder called `__System` that will contain system documents. This folder is only visible to the Super User roles and can't be renamed or deleted.

REPORTS

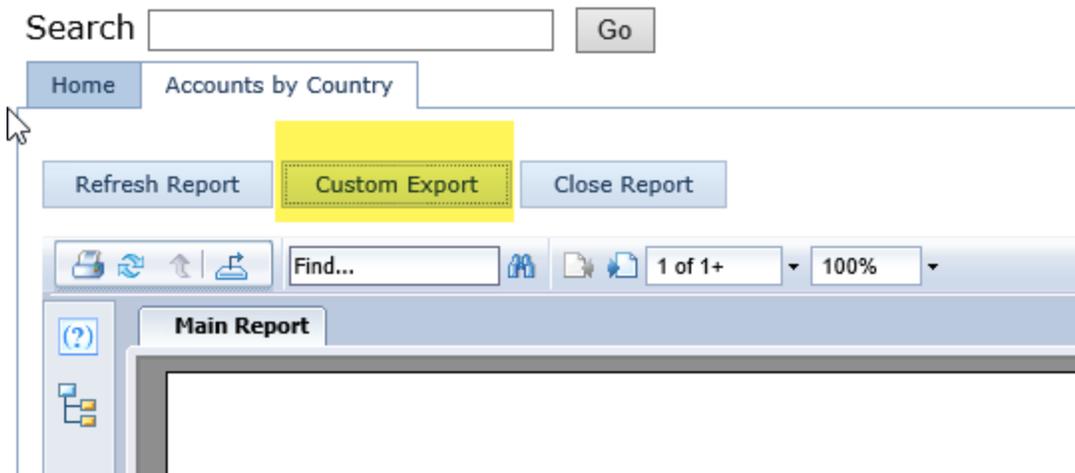

ALLOW THE SEND TO FEATURE WITH THE PDF VIEWER (3.8.2.0)

The Send To feature only worked when you were using the web viewer. This has changed to also work when using the pdf viewer.

The Send To feature will send a copy of the report to a file location and/or email the report each time it is run from the homepage or called from RS Express.

ADDED CUSTOM EXPORT OPTIONS (3.8.2.5)

A New Custom Export button was added to the Web Viewer. Using this button you can set export options for Excel and CSV and then export the report using those options.

ADDED NEW EXPORT OPTIONS TO THE LIST (3.8.2.5)

In list of output type the following were added. Excel Workbook (xlsx), Word, Editable RTF, Text and Tab Separated Text.

RS EXPRESS

FIXED A PROBLEM WITH THE ERROR PAGE (3.8.2.5)

If the RS Express report gets an error, it should open an error page to display what the problem is. This page was getting an error because the user has not first logged into the system. This has been corrected and the error page is now displayed.

ADDED VIEWER OPTION (3.8.2.5)

A new option has been added to RS Express to allow the report to be viewed in different file formats. To use this new option, add Viewer=[format] to the query string. Valid options are CRWebViewer, Pdf, Excel, ExcelData, ExcelWorkbook, CSV, Text, Tab, Word, RTF and EditableRTF.

USERS

REMOVED THE USERID FROM THE QUERY STRING (3.8.5.1)

To improve the security when editing a user, the user id has been removed from the visible query string.

REMOVED USERID FROM THE QUERY STRING (3.8.7.1)

To improve the security when editing a user, the UserID has been removed from the visible query string

ADDED A COPY USER FUNCTION (3.8.8.1)

To increase the speed of adding new users, a copy user button has been added to the User grid.

ROLES

UPDATED THE ROLES PAGE TO USE NEW GRID (3.8.2.5)

The Roles page has been changed to use the new grid style. The new grid allows the user to set the page size, sort each column, search in any of the columns and Group by any of the columns.

Roles [Add New Role](#)

Page 1 of 1 (8 items) Page size: 20

CHANGED THE SELECTION FOR ROLES (3.8.2.5)

The code has been changed to alter the roles that are returned and displayed when the user is an Administrator and not a Super User.

CHANGED THE SAVE ROLES FUNCTION (3.8.3.0)

The code has been changed so that Admin users can view the newly added role after it's been added. Before this change the Super User needed to approve and assign the new role before the Admin could view it.

SCHEDULER CHANGES

ADDED SAVE AND SEND ONLY WHEN THERE IS NO DATA (3.8.1.0)

This new feature allows the report to be saved and have the output sent when either the report has no data or when the report does have data. This can be helpful when you do not wish to send an empty report.

Document | Folder & Parameters | Output File Name | External Parameters | Schedule

Job ID 16

Job Description Account Report

Output Format PDF

Disable Live Data Yes No

Save and Send Output Save and send output only when the following is true

Report is empty

Report has data

Last modified by Administrator on 3/20/2017 5:06 PM

ADDED CUSTOM OUTPUT FILE NAME (3.8.1.0)

This new feature allows the scheduled job to have a custom file name that will be saved to history and also attached to any email sent. The file name can contain any text entered along with tokens that can be used to dynamically change the file name. The date token can be customized by using date parts from the table below.

| | | | | | | | |
|----------|---------------------|------------------|---------------------|----------|-------|--------------|------------------|
| Document | Folder & Parameters | Output File Name | External Parameters | Schedule | Email | Alert Report | Unmanaged Output |
|----------|---------------------|------------------|---------------------|----------|-------|--------------|------------------|

Use the box below to change the output file name. You can type in any text for the name, but you do not need an extension. You can also use tokens to dynamically change the name.

Output File Name

The default name is [FileName]_[Date:yyyy_MM_dd hhmmssff]

Below are the available tokens that can be used:

| | |
|------------------|--|
| [FileName] | This is the report file name without the extension |
| [JobID] | This is the unique Job ID from the first tab |
| [JobDescription] | This is the job description from the first tab |
| [DateTime] | This is the current date and time formatted with the format of yyyy-MM-dd hhmmss |
| [Date:] | This allows you to determine the format of the date and time using the standard date parts. For example, [Date:yyyy-MM-dd] Note: Do not use forward-slash, backslash or colon since they are not valid in file names. |
| [ParameterX] | This will use the value for the parameter with the "X" being substituted with a number. For example, [Parameter1] will get the value for the first parameter. |

Note: The final name cannot be larger than 255 characters and the file name cannot contain the following special characters: \ / : * ? < > |

| | |
|--------|--|
| "d" | The day of the month, from 1 through 31. |
| "dd" | The day of the month, from 01 through 31. |
| "ddd" | The abbreviated name of the day of the week. |
| "dddd" | The full name of the day of the week. |
| "h" | The hour, using a 12-hour clock from 1 to 12. |
| "hh" | The hour, using a 12-hour clock from 01 to 12. |
| "H" | The hour, using a 24-hour clock from 0 to 23. |
| "HH" | The hour, using a 24-hour clock from 00 to 23. |
| "m" | The minute, from 0 through 59. |
| "mm" | The minute, from 00 through 59. |
| "M" | The month, from 1 through 12. |
| "MM" | The month, from 01 through 12. |
| "MMM" | The abbreviated name of the month. |
| "MMMM" | The full name of the month. |
| "s" | The second, from 0 through 59. |
| "ss" | The second, from 00 through 59. |
| "t" | The first character of the AM/PM designator. |
| "tt" | The AM/PM designator. |
| "y" | The year, from 0 to 99. |
| "yy" | The year, from 00 to 99. |
| "yyy" | The year, with a minimum of three digits. |
| "yyyy" | The year as a four-digit number. |

ADDED A NEW OUTPUT TYPE (3.8.1.0)

A new output type was added to allow for Excel Data Only in the older xls format.

The screenshot shows a configuration form with the following fields and options:

- Job ID:** 3
- Job Description:** Excel Data Only XLS
- Output Format:** Excel Data (xls) (highlighted in yellow)
- Disable Live Data:** Radio buttons for Yes and No, with 'No' selected.
- Save and Send Output:** A checkbox labeled 'Save and send output only when the following is true' is checked. Below it are two radio buttons: 'Report is empty' and 'Report has data', with 'Report has data' selected.
- Active:** A checkbox is checked.

Additional information at the bottom of the form:

- Last Execution Date: Never Run
- Created by Jeff Ivon on 4/6/2017 5:46 PM

FIXED BUG WITH BOOLEAN PARAMETERS (3.8.1.0)

The report parameter section was not saving Boolean parameters correctly

CHANGED THE CODE TO CHECK FOR MISSED QUEUED JOBS (3.8.1.0)

The code was changed to look for any queued job that might have been missed.

ADDED COLUMN CHOOSER TO THE GRID (3.8.2.0)

On the Scheduled Documents page, you can now right click on any column header and get a context menu that allows you to either hide the column or select Column Chooser. The Column Chooser will open a window of available columns. To add a column, select it and drag it to the column header. It can be inserted in between any two columns.

ADDED DRILL DOWN TO THE SCHEDULE JOBS LIST (3.8.2.0)

On the Scheduled Documents page, you can now drill down on each job to display the History and then drill down on a history record to view the details of each job. This will allow you to view all the job information on one page with going to the History page and the Schedule Log page.

Enter text to search... Search Clear

ADDED DATE OFFSET TO THE OUTPUT FILE NAME (3.8.2.0)

Using the Date Offset you can have the date token move back or forward relative to the current time. In the screen shot below the date displayed in the file name would be 1 month behind the current date.

Document Folder & Parameters Output File Name External Parameters Schedule Email Alert Report Unmanaged Output

Use the box below to change the output file name. You can type in any text for the name, but you do not need an extension. You can also use tokens to dynamically change the name.

Output File Name Sales Report [Date:MMM-yyyy ddhhmm]

Date Offset **Month** -1 Use the date offset to add or subtract the date part selected from the date token.

The default name is [FileName] [JobID] [JobDescription] [Date:MM-dd hh:mm:ssff]

Below are the available tokens:

- [FileName] This is the file name from the first tab
- [JobID] This is the unique job ID from the first tab
- [JobDescription] This is the job description from the first tab
- [Date:MM-dd hh:mm:ssff] This is the current date and time formatted with the format of yyyy-MM-dd hh:mm:ss
- [Date:] This allows you to determine the format of the date and time using the standard date parts. For example, [Date:yyyy-MM-dd] Note: Do not use forward-slash, backslash or colon since they are not valid in file names.
- [ParameterX] This will use the value for the parameter with the "X" being substituted with a number. For example, [Parameter1] will get the value for the first parameter.

Note: The final name cannot be larger than 255 characters and the file name cannot contain the following special characters: \ / : * ? < > |

NEW CHECKBOX FOR THE UNMANAGED OUTPUT FILE NAME (3.8.2.0)

A new checkbox was added to the Unmanaged Output section to allow it to use the new Output File Name for the name. When using this you only need to have the path entered and the scheduler will add the file name using the Output File Name settings.

The screenshot shows the 'Unmanaged Output' configuration tab. It contains three sections: 'Unmanaged Output' with 'Yes' and 'No' radio buttons; 'Output File Name (complete path)' with a text box containing 'C:\Data\' and a checkbox 'Use the same name as the Output File Name' which is checked and highlighted in yellow; and a descriptive text block about using date tokens in file names.

ADDED COLORED GROUPS ON THE UNMANAGED OUTPUT TAB (3.8.2.0)

The three sections of the Unmanaged Output tab now stand out better with a frame around each one.

This screenshot shows the same 'Unmanaged Output' configuration tab as above, but with three distinct colored frames (light blue) around the 'Unmanaged Output' section, the 'Output File Name' section, and the 'FTP' section. The 'FTP' section includes fields for 'FTP Type' (Standard/SFTP), 'FTP Hostname', 'FTP Port' (21), 'FTP Transfer Type' (Binary), 'FTP Username', 'FTP Password', 'FTP Remote Folder', and 'FTP File Name' (with a checked checkbox for using a generated filename). Below it is the 'Printer' section with a 'Printer Name' dropdown and text box.

ADDED CODE TO THE SCHEDULER TO CHECK FOR DUPLICATE JOBS (3.8.2.0)

The scheduler performs additional tests to check if a job is already running or would create a duplicate run. If this is determined the information is added to the schedule log and the job is removed from the queue.

CHANGED THE CODE TO ALLOW MORE THAN ONE PARAMETER TOKEN (3.8.2.0)

When using the Output File Name feature you can now have more than one parameter token in the file name. The limit has also been increased to 10 parameters

For example, “Account-Report-Over – [Parameter1] Sorted By [Parameter2]” uses both parameter 1 and 2 in the file name.

FIXED A PROBLEM WITH BOOLEAN PARAMETERS (3.8.2.2)

When a report was run that had a Boolean parameter and the value was true, the system would not store the correct value.

CHANGED THE CALCULATION FOR QUARTERLY JOBS (3.8.2.4)

When calculating the Next Run Date for quarterly jobs, if the start date was in the future more than 1 quarter it would not calculate the correct date.

CHANGED THE SORT ORDER FOR THE SCHEDULE LOG GRID (3.8.2.5)

When a user drills down to the Schedule Log grid, that sort order has been changed to display the records in the order that they occurred.

ADDED NEW OPTION TO TURN OFF THE CLEANUP UTILITY (3.8.2.6)

Added a new option for the scheduler to turn on or off the cleanup utility. You can also set the time that the utility runs. This had been hard coded to run at 1:00 AM. You can set the option on the Scheduling Options tab in the System Setup and Configuration page.

System Setup and Configuration

| Configuration | Appearance | Publishing Options | Viewer Options | Scheduling Options | Email Options | Trouble Shooting | License Key |
|---|------------|--|----------------|--------------------------------------|---------------|------------------|-------------|
|  This tab allows you to manage options for the Scheduler | | | | | | | |
| Schedule History Duration | | <input type="text" value="90"/> | | | | | |
| Schedule History Type | | <input type="text" value="Days"/> | | | | | |
| Print Options | | <input checked="" type="radio"/> Crystal Reports Engine <input type="radio"/> Adobe Reader | | | | | |
| | | Adobe Reader Location: <input type="text"/> | | | | | |
| Limit Schedulers to edit and delete their jobs | | <input type="checkbox"/> | | | | | |
| Time duration to look back for missed jobs (in minutes) | | <input type="text" value="10"/> | | | | | |
| Email address for failed jobs | | <input type="text"/> | | | | | |
| Cleanup Utility | | <input checked="" type="radio"/> On <input type="radio"/> Off | | <input type="text" value="1:30 AM"/> | | | |
| Re-calculate the Next Run Date for each scheduled job | | <input type="button" value="Re-Calculate Next Run Date"/> | | | | | |

FIXED PROBLEM WHERE ADMINS AND SCHEDULERS WOULD SEE DUPLICATE JOBS (3.8.2.6)

There was a problem where users that belonged to the Admin or Scheduler roles would see duplicate jobs in the list of scheduled jobs. The code now only displays unique rows in the grid.

REMOVED THE KEYWORD DISTINCT FROM THE SQL STATEMENT (3.8.3.0)

We were using the SQL keyword DISTINCT to remove duplicates from the list of scheduled jobs and this caused an error on some SQL Server databases. This has been removed from the SQL statement and duplicates are removed in code after the selection from the database.

ADDED FTP SUPPORT FOR ACTIVE AND PASSIVE CONNECTIONS (3.8.5.0)

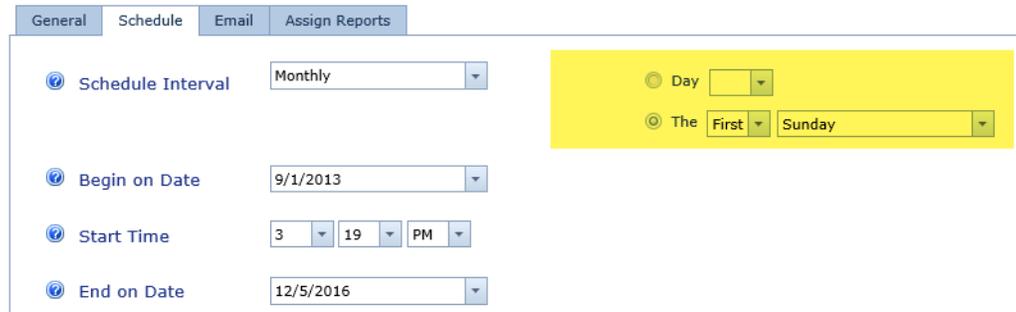

Added a new option to the FTP section to allow the user to select Active or Passive for the connection mode.

SCHEDULE GROUPS

CHANGED THE MONTHLY AND QUARTERLY GROUPS (3.8.1.0)

There was a bug when loading scheduled groups that were scheduled to run either monthly or quarterly. The correct values would not always be loaded.

Manage Scheduled Group

General Schedule **Email** Assign Reports

Schedule Interval Monthly

Day

The First Sunday

Begin on Date 9/1/2013

Start Time 3 19 PM

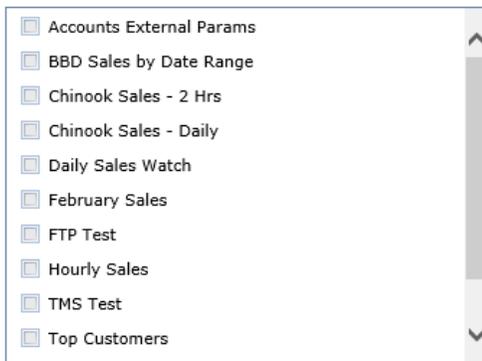

End on Date 12/5/2016

CHANGED THE REPORT SELECTION (3.8.1.0)

The report selection tab has been changed to display longer file names.

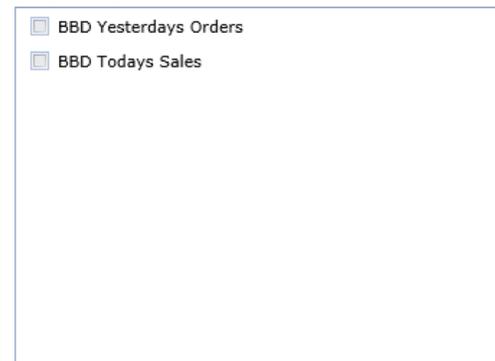

Assign Reports to this Group:

Available Reports:

- Accounts External Params
- BBD Sales by Date Range
- Chinook Sales - 2 Hrs
- Chinook Sales - Daily
- Daily Sales Watch
- February Sales
- FTP Test
- Hourly Sales
- TMS Test
- Top Customers

Assigned Reports:

- BBD Yesterdays Orders
- BBD Todays Sales

UPDATED TO ALLOW JOBS USING EXTERNAL PARAMETERS (3.8.2.3)

The code was changed to allow jobs that are using external parameter to be added to groups and to have the output merged into a single email attachment for each user.

CHANGED THE SQL SELECT FOR SCHEDULED JOBS (3.8.2.4)

The SQL Select call for the scheduler was changed to use a static start time across all select statements. The code was using the current time and this didn't work correctly if the total time to process all the jobs took more than 1 minute. This caused jobs to send multiple emails to the same user.

FIXED PROBLEM WHERE EMAILS WERE NOT SENDING CORRECTLY (3.8.2.6)

The code didn't check to see if the emails should be sent one at a time or all together in one email.

TRUSTED SYSTEM

UPDATED CODE TO USER NEW CODE (3.8.3.2)

Changed the code the Trusted System feature to use new data access code.
