

RIPPLESTONE 3.25 – RELEASE NOTES

CONTENTS

System.....	2
The Show All Parameters Option was Removed (3.25.6.1)	2
Fixed bug when Decrypting the passwords and Connection Strings (3.25.9.1)	2
Home Page	3
Updated the code for the Send To feature (3.25.6.1)	3
Updated the Export to CSV (3.25.6.1)	3
Updated Scheduled Documents Section (3.25.6.2).....	3
Scheduler.....	4
Updated the Schedule History to Show External Parameter Jobs (3.25.4.1)	4
Updated the Schedule History to only save the start time once (3.25.5.1)	4
Check to see if there are any records to process for an External Parameters job (3.25.5.2)	4
Added a check to handle a report that has an unused parameter (3.25.6.1)	4
Updated the Export to PDF feature (3.25.6.1)	4
Updated the FTP Engine (3.25.9.3).....	4
Admin Dashboard	5
Changed the list of Scheduled Jobs (3.25.8.2).....	5
Changed the list of Documents Run (3.25.9.1).....	5
Trace Logs.....	6
Updated the Grid to add Search and Paging (3.25.8.1)	6
Active Users	6
The Active Users Page now displays the UserID and the USERNAME (3.25.2.1).....	6
Updated the Grid to add Search and Paging (3.25.8.1)	6
Edit User	7
Removed the List Box on the User Security tab (3.25.5.1)	7

THE SHOW ALL PARAMETERS OPTION WAS REMOVED (3.25.6.1)

The option "Show All Parameters" in the System Setup and Configuration page was removed. This was once used by the scheduler but is no longer needed.

The screenshot shows the 'System Setup and Configuration' page with several tabs: Configuration, Appearance, Publishing Options, Viewer Options, and Scheduling Options. The 'Configuration' tab is active. A list of settings is displayed, each with a checkbox. The 'Show All Parameters' option is highlighted with a red rectangular box. The other settings and their states are as follows:

Setting	State
Use Integrated Windows Authentication	<input type="checkbox"/>
Use Row-Level Security	<input checked="" type="checkbox"/>
Use Report-Level Viewing Restrictions	<input checked="" type="checkbox"/>
Use the Include Date Parameter Option	<input checked="" type="checkbox"/>
Show All Parameters	<input checked="" type="checkbox"/>
Encrypt Passwords and Connection Strings	<input type="checkbox"/>
Use Minimal Home Page	<input type="checkbox"/>
Display Favorites as Home Page	<input type="checkbox"/>
RS Express - Active	<input checked="" type="checkbox"/>

FIXED BUG WHEN DECRYPTING THE PASSWORDS AND CONNECTION STRINGS (3.25.9.1)

There was an issue when the passwords and Connections Strings that are stored in the database are changed from being encrypted to being decrypted. The decrypted data would be stored in the database as an empty field.

UPDATED THE CODE FOR THE SEND TO FEATURE (3.25.6.1)

The code to create the output file was updated.

UPDATED THE EXPORT TO CSV (3.25.6.1)

The export to CSV was updated to fix a problem where extra HTML code was appended to the end of the file.

UPDATED SCHEDULED DOCUMENTS SECTION (3.25.6.2)

Updated the Scheduled Documents section to make it easier to read and display the Next Run Date.

The screenshot shows a software interface with two main sections. The top section, titled "Document Actions", contains a "Run Report" button with a green play icon, a "Select Output" dropdown menu currently set to "Web Viewer", and a plus icon. The bottom section, titled "Document Schedules", lists four scheduled documents. Each document entry includes an "Edit Schedule" link with a pencil icon and a "Next Run Date" field. The "BBD Today's Sales" entry has a "History" link with a calendar icon and a specific next run date of "10/3/2025 3:00:00 PM". The "Daily Job to run at 9AM and 3PM" entry includes a "Last Scheduled Instance" link with a play icon, a "History" link with a calendar icon, and an "Edit Schedule" link. At the bottom of the "Document Schedules" section is a "Schedule New Document" link with a calendar icon.

UPDATED THE SCHEDULE HISTORY TO SHOW EXTERNAL PARAMETER JOBS (3.25.4.1)

The Schedule History will display an entry showing that the job is using External Parameters and will create new entries for each parameter set.

UPDATED THE SCHEDULE HISTORY TO ONLY SAVE THE START TIME ONCE (3.25.5.1)

The Schedule History Status will save the Start Time when the job begins to run. Not when the job is added to the queue. The UpdateScheduleHistoryStatus function was also modified to fix a problem with the parameters.

CHECK TO SEE IF THERE ARE ANY RECORDS TO PROCESS FOR AN EXTERNAL PARAMETERS JOB (3.25.5.2)

When the scheduler is running an External Parameters job, it's possible that the query to select the list of parameters comes back empty. If that happens, there is nothing to be processed. The scheduler will log that the job has been completed but that there were no records to be processed.

ADDED A CHECK TO HANDLE A REPORT THAT HAS AN UNUSED PARAMETER (3.25.6.1)

When supplying the parameter values for the report, if the parameter is not used in the report it is skipped. Before this change the scheduler would log that there was no parameter value stored in the database.

UPDATED THE EXPORT TO PDF FEATURE (3.25.6.1)

Updated the Export to pdf. The Create bookmarks from group tree option was updated to fix a bug.

UPDATED THE FTP ENGINE (3.25.9.3)

Updated the FTP engine to the latest version (12.7.0)

CHANGED THE LIST OF SCHEDULED JOBS (3.25.8.2)

Updated the Scheduled Jobs Run grid to allow the user to select different date ranges. The grid previously showed only today's date.

Scheduled Jobs Run:

ACTIVE USERS

THE ACTIVE USERS PAGE NOW DISPLAYS THE USERID AND THE USERNAME (3.25.2.1)

The UserID field in the LoggedInUsers table was changed from a Text field to an integer. This was done to allow the Administrator role to filter the list of users. The administrator should only be able to view the users that they manage.
